

# EBL TOKEN

White Paper

Version 1.0

Creating a new way to invest.

## SUMMARY

E-Bull Coin will be launched in 2020 and will be listed on the main exchanges of cryptocurrencies. E-Bull Coin is a world currency and the currency of choice for investors.

E-Bull Coin has advanced technology that develops and enhances the basic functionality of pioneering cryptocurrencies such as Bitcoin, adopting an innovative model for currency appreciation and sharing.

# 1- PAYMENTS SOLUTIONS

## 1.1 HISTORY OF PAYMENTS SOLUTIONS

Money is a fundamental part of society and the great responsible for making the economy turn. It is so intrinsic in our day to day that we can't imagine a world where it is not present, but it has not always been so. Technology has completely changed the way we communicate, drive and pay. From the exchange of goods to payment via NFC were many years and important transformations.

Until the emergence of money, barter was the main way of doing business. Food, animals and services were the main currencies of exchange and there was no notion of value equivalence.

Each one changed what he had for what he needed. The great difficulty in this system, besides transportation, was to find someone who was looking for what was offered and offering what was wanted.

From the moment some products became more sought after than others, they became currency. This happened with salt, for example. Being a difficult item to acquire and of great use for preserving food, it was considered quite valuable. In some regions people were paid with salt, and that is why the term "salary" came up.

Many products have been used over the years until the discovery of the metal. Because it is rare, hard to come by and durable, it has served perfectly as a coin, in its natural state or in the form of jewelry and weapons. The value varied according to the abundance of the material, the rarer, the more valuable.

Over time, the coins began to be minted with standardized weight and value. In the beginning, the value corresponded to the material used to make it. With the evolution of the technique, other materials began to be used in the confection and they became worth what was engraved on the face and not the material that had been used in the preparation.

Keeping possessions with goldsmiths became a common practice among people, and that is how the first ballots came up. The paper issued as guarantee came to be used as payment, circulating among people. Later, the banks began to issue and to regulate the ballots. Coins came to be used as a change.

Since then, a lot has changed and always with the help of technology. With the emergence of plastic cards and electronic payments, bills are being used less and less. And the tendency is that it will decrease even more.

Despite the evolution of means of payment, there are still some obstacles to these traditional means, such as the high fees charged by payment platforms and card machines, as well as taxes levied by the government for currency transactions between people.

## **1.2 HIGH PROFIT CRYPTO PAYMENTS SOLUTIONS**

---

From this scenario we can list some points where E-Bull Coin will present solutions aligned with the future of the digital payments market:

### **- Digital Infrastructure**

With the blockchain network, we will create a decentralized ecosystem that guarantees security and stability. The network will operate 24 hours a day, 365 days a year, operating without interruptions and without taxes.

### **- Popularization of the use of digital money**

We will create tools and benefits for users and marketing campaigns with an affiliate plan and aggressive rewards. In addition, our portfolio will be user friendly, simplifying the use of EBL.

### **- Lower costs**

The more users E-Bull Coin has, the lower the costs of network deployment.

### **- First cryptocurrency with a reserve fund**

Through the reserve fund, we will create a tool to stabilize the currency where it will be reserved 10% of everything that is sold in the investment program, forming a reserve so that HPX exchange can validate a minimum market value for EBL. The more people who use our network, the greater the market value of E-Bull Coin.

## 2- CRYPTOCURRENCIES TECHNOLOGY

### 2.1 BLOCKCHAIN TECHNOLOGY

Bitcoin created the blockchain. From it we can carry out peer-to-peer transactions without the intervention of third parties, with total security, initiating the era of cryptocurrencies.

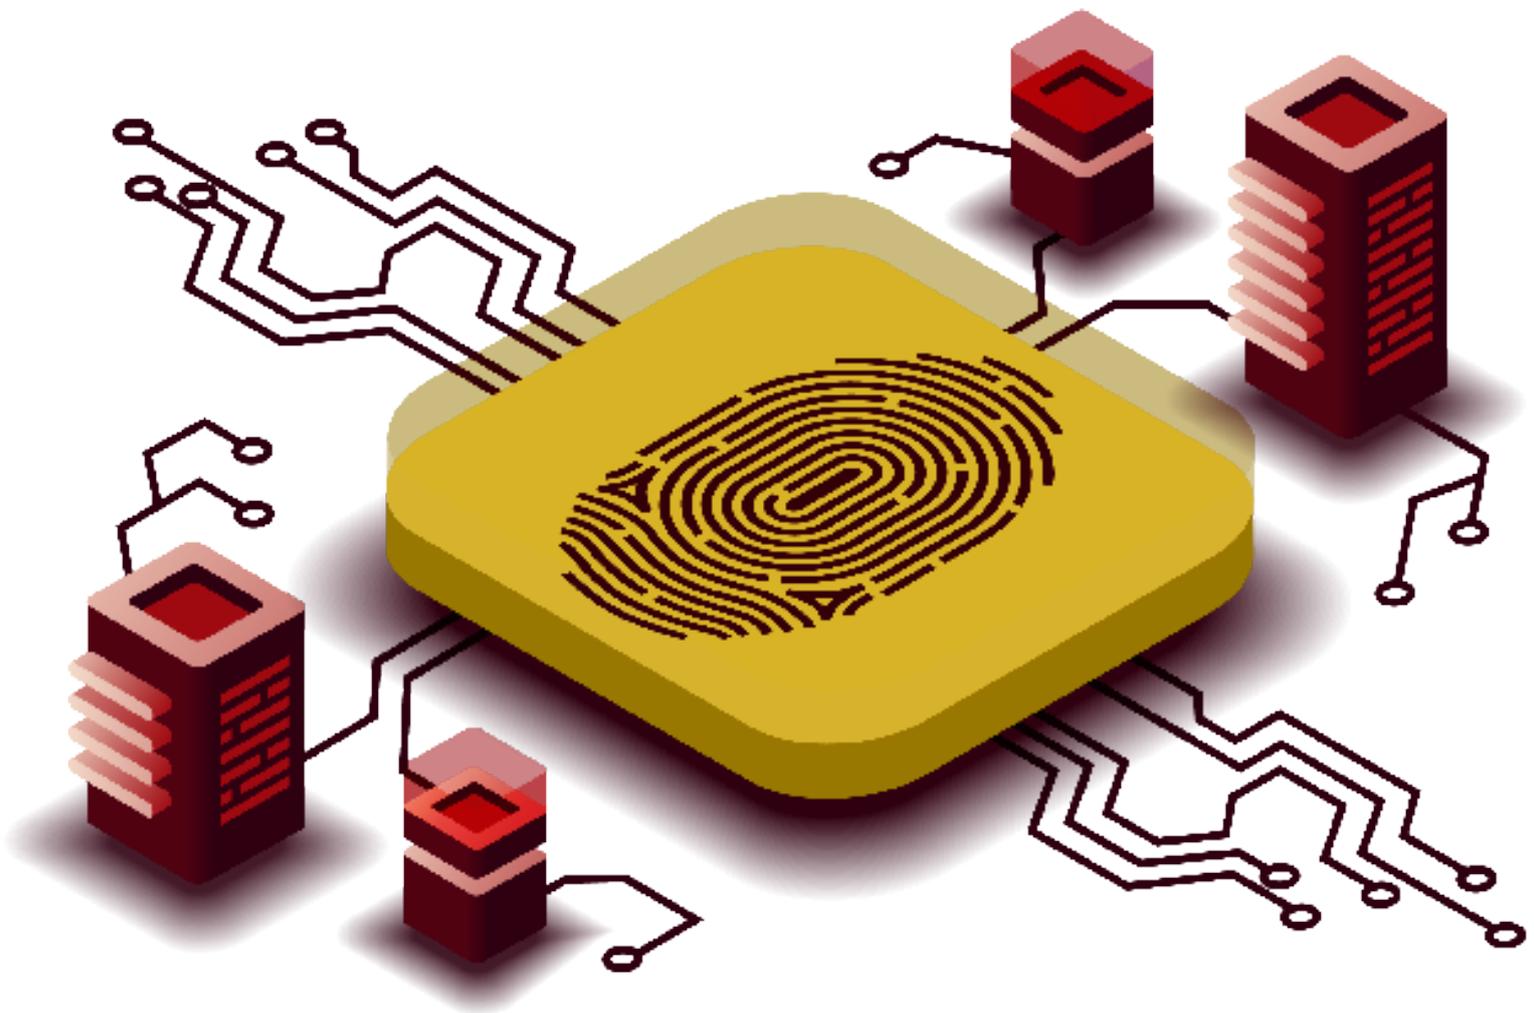

The technology has been evolving since 2009 and several projects have presented different applications for the decentralized registration of information.

Blockchain is a book of public accounting records, where all transactions performed between parts of the network can be audited. Thus it is impossible to adulterate or falsify your data, anyone with internet access can track a transaction and know its status in real time. This technology eliminates the need for a third party in the process to certify the truthfulness of the information.

The network is decentralized. This means that the information is not owned by any private or governmental institution. Each computer running the software has a copy of the entire logbook. If a computer loses its information or has Internet access the network will remain operational and intact because all other members have data backup. Synchronization between network computers is instantaneous and automatic.

Security and transparency are characteristics of the blockchain. All transactions performed on the network are approved by means of a distributed consensus. This ensures that each computer connected to the network confirms a new transaction, based on the data in the blockchain. Therefore, each transaction requires a history that guarantees its veracity.

All computers must agree to this record. No isolated computer can create a record on the network. If attempted, this false record will not exist in the transaction book of all other computers, so the attempt to write will not be allowed and that member will be banned. The distributed consensus ensures security by having the network itself oversee transactions without human intervention or any other third party system.

## 2.2 E- BULL COIN TECHNOLOGY

The designer behind E-Bull Coin unites several tools and layers by bringing together various differentiation features that have been created in the system which promises to generate more performance compared to other existing systems, ensuring greater security and profitability, solving the current cryptographic problems that exists.

For the administration of investments, a smart platform will be created, configured and developed for this function. The client's initial investment will be recorded and used for the development of the currency itself.

## **2.2.1 E-BULL COIN PHASES**

High Profit Crypto aims to be an environment fully integrated with the needs of the community. From this prediction, the development of the blockchain meets all the requirements of functionality and security. Demonstrates the project steps sequentially.

### **ICO**

The Initial Coin Offering is the phase to raise funds to make the project viable and profitable.

### **BETANET**

Phase focused on reducing the impact to users, performing usability tests. All HPX Crypto features will be available to the user.

### **MAINNET**

Release of source code repositories and delivery of the consensus system to the HPX Crypto community.

### **IMPLEMENTATION AND ADOPTION PHASE**

At this stage, the community will be able to acquire EBL's and start operating with its trading partners.

**HPX  
BUSINESS  
STRATEGY**

## 3- HPX BUSINESS STRATEGY

### **3.1 INITIAL COIN OFFERING**

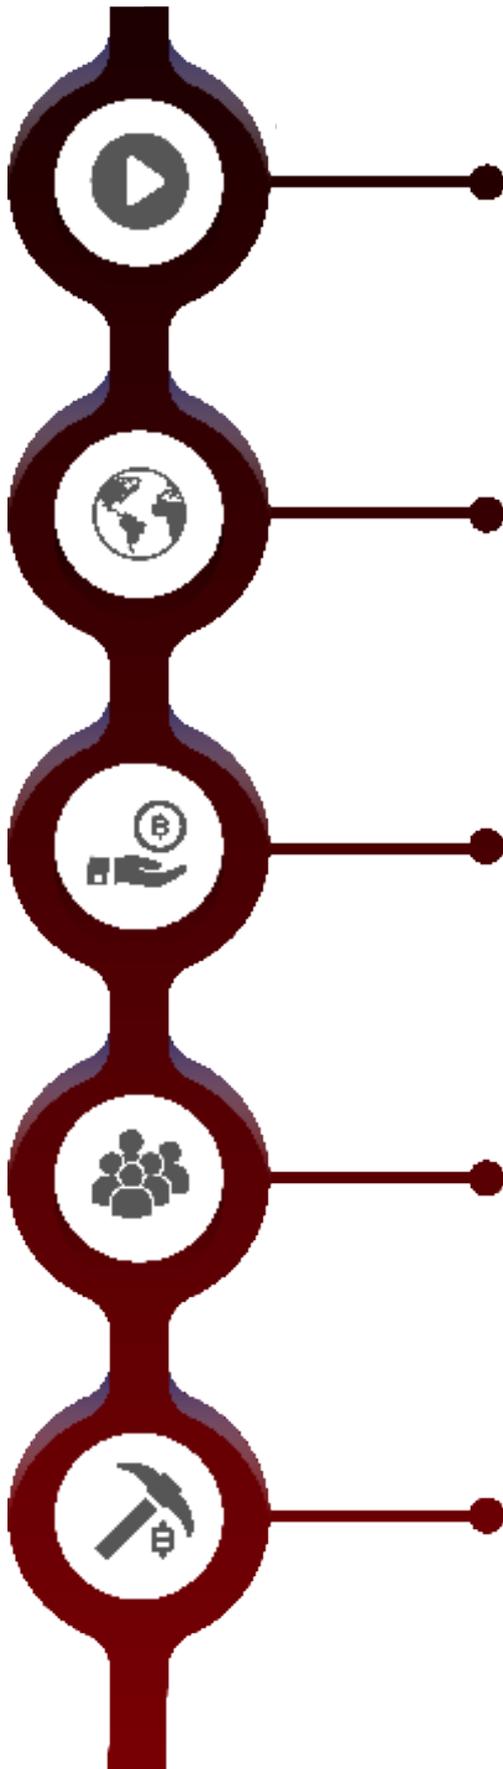

E-Bull Coin introduces a new ICO model to the community. In recent years, investors have seen many projects raise millions of dollars at ICO and fail to deliver an operational blockchain. Many teams get large amounts of the collected values and do not continue the projects until the final stages.

HPX understands that the best marketing strategy is mass adoption. Soon, users will receive as a bonus the bulk of ICO's revenue, so that each user is an E-Bull Coin ambassador. This partnership aims to promote the project and expand the boundaries, boosting the user community.

### **3.2 ICO PHASES**

All users of the investment program will have their invested amounts converted into EBL's. The fixed quote will be sent to the EBL's wallet of all users. From this moment, all the E-Bull Coin values of the virtual offices will be sent to the EBL portfolio of all users, from this moment the market will determine their valuation, remembering that the reserve fund will guarantee a minimum value for EBL of 0.003 BTC (guaranteed value of purchase within exchange Bullniex).

## 4- ROAD MAP

### - February 2018

Beginning of Creation: The first draft of the project was written and the idea began to be put into practice.

### - December 2018

Project and Site Launch: here is our brand zero. After months of planning, the High Profit Crypto project takes shape and is launched on the internet.

### - January 2019

Investment Launch: Investments in HPX Crypto and E-Bull Coin will be released to interested investors.

### - December 2019

Expansion

We have a target of 100,000 investors by the end of 2019.

### - February 2020

Beginning of mining: start of the E-Bull coin mining process.

#### - December 2020

Headquarters: official launch of the operational headquarters in Bangkok, Thailand, where exchange operations will also be managed and regulated.

#### - January 2021

End of the investment program: completion of the High Profit Crypto system, consequently the investment program and affiliates.

#### - January 2021

Launch of the portfolio: launch of the first version of Bull Wallet, E-Bull currency wallet. Through it all users will receive the quantities of E-Bull Coin purchased through the investment program.

#### - March 2021

Exchange launch: This will be the main platform for EBL negotiations, which will be E-Bull's main marketing source. Main focus of EBL negotiations, where the minimum market value will also be guaranteed through the reserve fund collected in the investment program.

#### - April 2021

Negotiations around the world  
At this stage we believe that E-Bull will already have great value in the market and will be negotiated by big players of the world of the cryptocurrencies.

## 5- REVOLUTION OF FUNDS

### 5.1 RESERVE FUND

One of the biggest problems in the mass adoption of cryptocurrencies is the high volatility of the market.

The crypto derivative market is still small compared to the older assets. At its all-time high of 2017, the value of all cryptocurrencies reached approximately \$ 880 billion. In the Forex market, approximately 2.5 trillion dollars are traded in a single day. The low volume traded with cryptocurrencies allows some wealthy investors to manipulate prices. This is a daily scenario in the world of speculative investments, but such manipulation damages business in general.

## **5.2 HPX RESERVE FUND**

Constant volatility can be detrimental to a company's balance sheet. One of the advantages of fiduciary coins lies in the fact that the market price does not change sharply over time.

To avoid this problem, E-Bull Coin implements the reserve fund. This fund aims to store 10% of the purchases made in the investment program to ensure a minimum market value for EBL in the Exchange Bullniex.

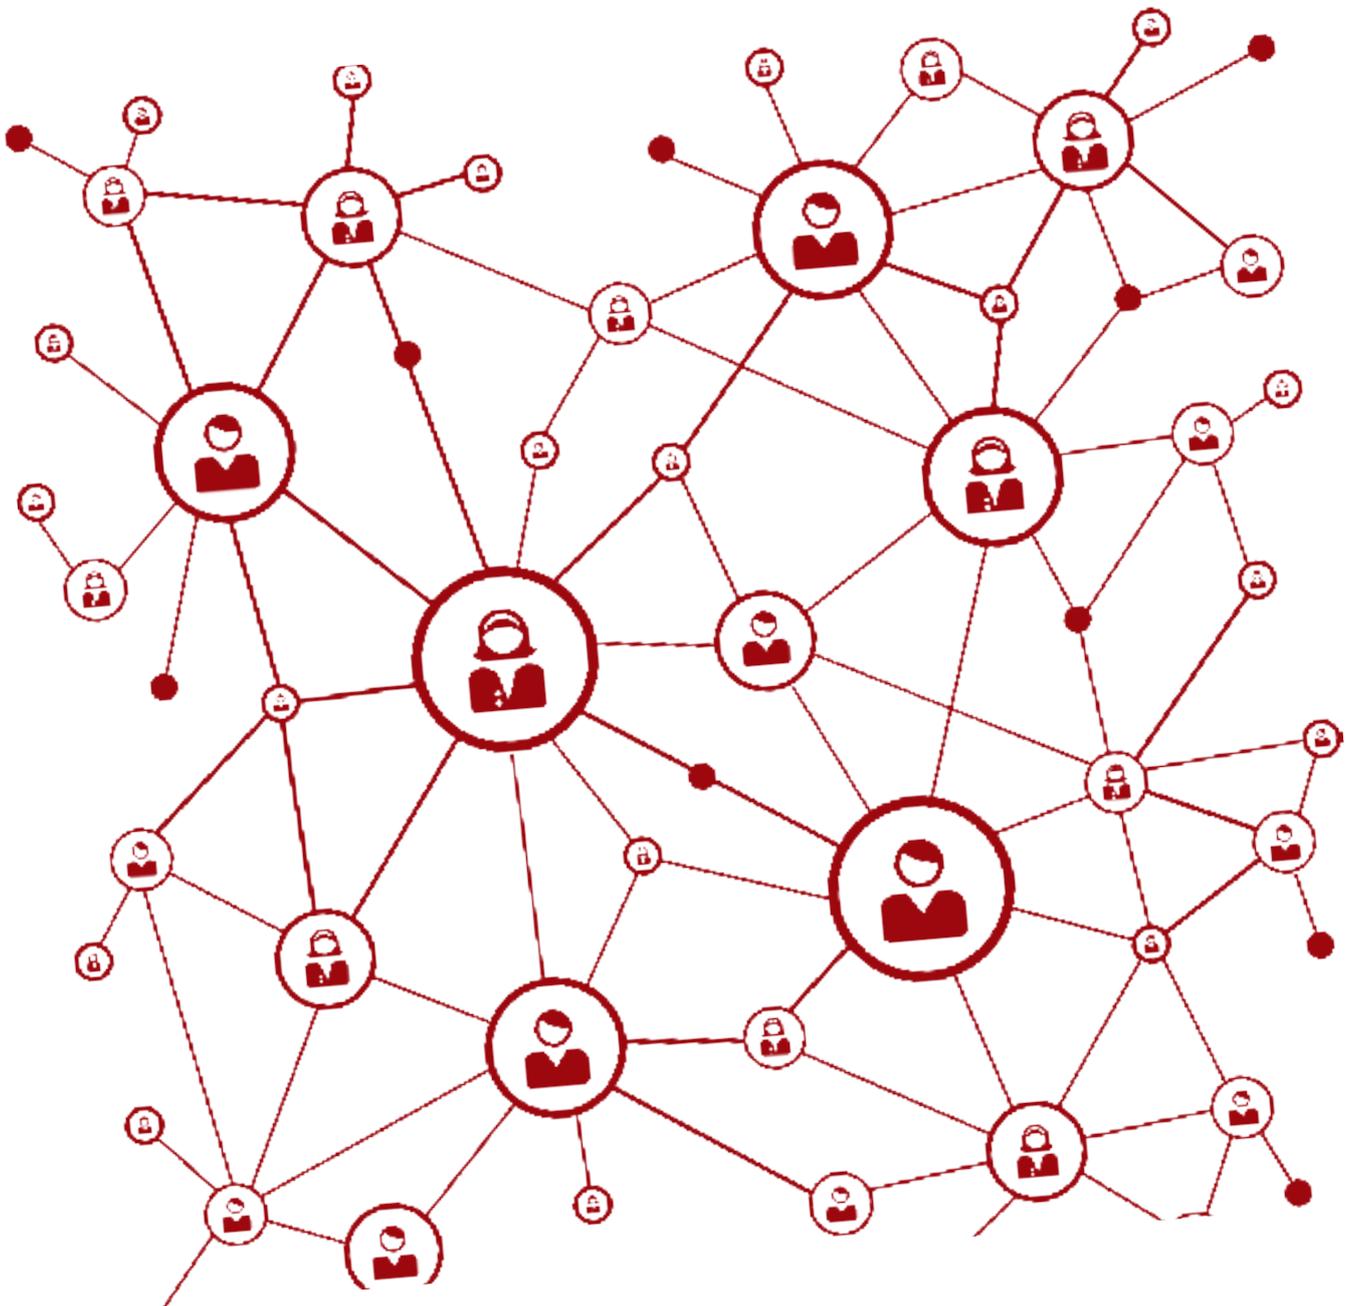

The EBL's reserved for the fund will be converted into bitcoin, thus creating a backup reserve with the main cryptocurrency in the market. This reserve will reduce the changes in the EBL exchange rate relative to bitcoin, making it more stable as its commercial use increases.

A large, stylized number '6' logo composed of four overlapping, semi-transparent red rings of varying shades, set against a solid red background. The rings are arranged in a way that they appear to be stacked and slightly offset, creating a sense of depth and movement.

# **INVESTMENT PROGRAM**

## 6- INVESTMENT PROGRAM

In addition to the blockchain's native technological advances, HPX Crypto presents a reward system for users who work to promote the use of our investment platform and consequently the E-Bull Coin. Investments made through the program will be boosted by up to 8 levels deep, and will provide earnings through profit sharing for users who excel in the program.

## 7- CONTACTS
